What is a 18650 battery?

An 18650 battery or 1865 cell is a cylindrical lithium-ion battery common in electronic devices. The batteries measure 18 mm (0.71 in) in diameter by 65 mm (2.56 in) in length, giving them the name 18650. The battery comes in many nominal voltages depending on the specific chemistry used.

Are 18650 batteries safe?

A 18650 protected battery is safer than an 18650 unprotected battery (less likely to overheat, burst or start on fire). Unprotected 18650 batteries are cheaper, but we do not recommend their use. Unprotected batteries should only be used where the load/draw and charging is externally monitored and controlled.

What is the voltage limit for a 18650 battery?

The specific voltage of a working 18650 battery ranges from 3.2V to 4.2V. The voltage limit setting of PCB is 3V ~ 4.35V. Unfortunately, this control system is not very precise. PCB doesn't stop charging until the voltage reaches 4.35V. But the peak voltage of the battery should be 4.2V.

What are the benefits of 18650 batteries?

One of the main benefits of 18650 batteries is their high energy density, which means they can store a lot of power in a relatively small size. This makes them ideal for portable devices where space is limited. Another advantage is that most 18650 batteries are rechargeable and can be used multiple times before needing replacement.

What temperature should a 18650 battery be stored?

The ideal storage temperature for a 18650 lithium battery is around 25°C (77°F). Another crucial tip is to avoid storing your batteries at 100% charge for extended periods of time. Instead, aim for a charge level of around 50%. Treat them like precious flowers, and they'll reward you with long-lasting performance.

How long does an 18650 battery last?

The easiest test is get a different fresh 18650. A 1200mah seems low, a 2500mah or 3500mah battery is going to give you longer runtime. Note: The 18650's are not readily available on Amazon right now, but they are available at Battery Junction. My suspicion is that it is up to 3 hours with a fully charged high mah 18650.
