- 8 - 000913AG Safety information and instructions This chapter contains the safety instructions which you  
must obey when you install and operate the inverter and perform maintenance operations

Noted: We suggest solar panel power should be 1.2-1.35 times higher than solar pump power,and solar pump  
inverter power should be same or higher level than solar pump. When solar pump distance to inverter higher  
than 100m,it should be equipped with Output reactor or higher level power inverter .for

Only a photovoltaic generator can be connected in the input of the inverter (do not connect batteries or other sources of power supply). The inverter can be connected to the electricity grid only in countries for which it has been certified/approved. The inverter cannot be connected to the DC side in parallel to other inverters to

The inverters are aimed at system integrators and end users who require high performance solar inverters for large photovoltaic power plants and industrial and commercial buildings. The inverters are available from 100 kW up to 500 kW, and are optimized for cost-efficient multi-megawatt power plants. World's leading inverter platform The ABB ...

ACSM1 solar pump inverter. Solar pump inverter overview The ACSM1 solar pump inverter is a low voltage AC drive of 0.3 to 355 KW rating designed to operate with energy drawn from photovoltaic cells (PV). The inverter is customized to operate in dual supply mode, so the grid connected supply is used in the absence of energy from PV cells.

ABB solar pump drive is an innovative solution that uses solar power as a reliable energy source for pumping water. Low-carbon economy With utilization of solarpower, ABB drives help in ...
