

Agilent 6641a and 6643a dc system power supplies

This series of 200 W linear-regulated DC power supplies is designed to maximize the throughput of DUTs through the manufacturing test process with fast up and down programming time. ...

GPIO DC POWER SUPPLIES. Agilent Technologies Models. ... Single Output System Power Supply. b) General Purpose Power Supply. Model Number: a) Agilent 6641A, 6642A, 6643A, 6644A, 6645A. ... Series 664xA 200 W AGILENT 6641A, 6642A, 6643A, 6644A, 6645A Series 665xA 500 W AGILENT 6651A, 6652A, ...

Keysight high performance DC power supplies offer speed and accuracy for test optimization. The single output, 200 W, GPIO 6641A-6645A provide fast, low-noise outputs; analog control of output voltage and current; fan-speed control to minimize acoustic noise; as well as parallel and series connections of multiple units.

Product Name: a) Single Output System Power Supply b) General Purpose Power Supply Model Number: a) Agilent 6641A, 6642A, 6643A, 6644A, 6645A b) Agilent 6541A, 6542A, 6543A, 6544A, 6545A conforms to the following Product Specifications: Safety: IEC 348:1978 / HD 401S1: 19811 EMC: CISPR 11:1990 / EN 55011:1991 - Group 1 Class B

autotransformer common terminal is connected to the neutral (earthed pole) of the ac power lines (supply mains). FUSES Only fuses with the required rated current, voltage, and specified type ...

The Agilent 6643A 200W, linear-regulated DC power supply is designed to maximize the throughput of DUTs through the manufacturing test process with fast up and down programming time. Programming of the DC output and the protection features can be done either from the front panel or using industry standard SCPI commands, via the GPIB.

Keysight high performance DC power supplies offer speed and accuracy for test optimization. ... 6643A DC Power Supply, 0-35 V, 0-6.0 A, 210 W, GPIB ... the right mix of performance and functionality for general purpose applications on the bench or in analog-controlled systems.

The Agilent 6641A 200W, linear-regulated DC power supply is designed to maximize the throughput of DUTs through the manufacturing test process with fast up and down programming time. Programming of the DC output and the protection features can be done either from the front panel or using industry standard SCPI commands, via the GPIB.
