Both AGM Batteries and Lithium-Ion batteries have their benefits and potential drawbacks for use in an RV. To help you find the best one for your rig, we decided to take a closer look at the nuts and bolts details, as well as how the factor-in real-world performance.

AGM batteries are less efficient than lithium batteries. In terms of power, lithium batteries can store 10% more power compared to their AGM counterpart and other lead-acid batteries. In addition, a lithium battery provides consistent power throughout its discharge time (from 100% to 1%).

Whether you want a simple absorbed glass mat (AGM) battery system that focuses on affordability and efficiency or a high-end lithium iron phosphate (LiFePO₄) battery to power your van, our expert blog post will walk you through the benefits of ...

Lithium iron phosphate (LiFePO₄) batteries have been taking over the market in recent years. Learn more about what makes them so popular and the key differences between lithium and Absorbed Glass Mat (AGM) batteries. What Are Lithium and AGM Batteries Used For?

AGM batteries are a type of lead-acid battery that utilizes Absorbent Glass Mat technology to store and deliver energy efficiently. On the other hand, Lithium-ion batteries employ lithium chemistry to achieve high energy density and ...

AGM batteries may be more suitable for those seeking a more affordable, maintenance-free option, while lithium batteries offer better long-term value, higher energy density and longer lifespan for those prioritizing performance and efficiency.

AGM, or Absorbent Glass Mat, batteries are a type of sealed lead-acid battery that offers several distinct advantages compared to traditional lead-acid batteries. AGM batteries have become increasingly popular in various industries due to their superior performance and reliability. How do AGM batteries work?

While a lithium battery is very versatile, it does not work for all situations. That's where AGM technology comes in. Today we are discussing the difference between an AGM vs. lithium battery. Keep reading for everything you need to know.
