

The consumption of fossil fuels has resulted in a significant rise in CO 2, making global warming a threat faced by all humanity [1]. The power sector, one of the major fossil fuel consumers and contributors to global carbon emission, accounts for around 40 % of global energy-related carbon emissions [2] was observed that in contrast to numerous other industries, power systems ...

The importance of the automated system of commercial electricity accounting (UMS) for consumer enterprises is determined not only by legislative requirements, but also by technical and economic considerations. In the conditions of the increase in the cost of electric energy and energy carriers, the approach to the organization of electricity accounting and control was ...

In recent years, the powerful CCSRs provided by DCs have facilitated the development of Cyber-Physical-Social Systems (CPSSs) [14].A CPSS, representing a holistic architecture with data collection devices, data transmission networks and system actuators, is applied to establish interactions among cyberspace, the physical environment and human ...

Recent data shows that there are approximately 10,000 commercial farms worldwide using automatic milking systems (AMS) to milk their cows. This figure is expected to grow rapidly in the coming years (De Koning, 2011). Therefore, the energy consumption of AMSs will become increasingly important.

The street lighting is one of major components in total energy consumption in cities. The paper is focused on a concept of street lamp control systems and function organization with remote monitoring, to reduce maintenance costs and energy consumption. A new approach to the definition of functional strategy organization for outdoor lighting systems is introduced in ...

Since energy is the time integral of power, power consumption should be considered, along with the impact of "time"; thus, we propose two designs of automatic energy consumption measuring ...

Introduction The Automated System for Commercial Accounting of Power Consumption (ASCAPC) is actively used in JSC âEURoeRussian RailwaysâEUR . There are three areas of production activity in which independent ASCAPC are operated: ASCAPC of the Railway junction (RJ), ASCAPC of the Traction substation (TS), ASCAPC of the Retail electricity ...

The management of such a complex system of power supply of a smart house is impossible without creating the appropriate infrastructure of smart meters (AMI) and the system of automatic control of electricity consumption, which should become the information conductor of the smart house with both

The automatic power factor controller optimizes and increases the output power whenever the power factor decreases below a standard threshold value. Furthermore, it also enables easy monitoring of the parameters, reduces electric consumption, and enhances the equipment"s lifespan. The attributes mentioned above are bound to increase the ...

[Show full abstract] Washington Public Power Supply System situation to illustrate that the public would pay higher costs with little change to their consumption habits. 1 figure. Read more Article

objects (power plants and substations), for nodes, DES, TES and the power system for RAO power grids; 3) make more accurate accounting and forecasting of the generation and losses of electricity in the power system, as well as specific fuel consumption and other technical and economic indications at the structural divisions of the power system ...

Building automation systems can have a significant impact on energy consumption in commercial and industrial buildings, reducing costs and improving sustainability. Here are a ...

VOLUME IV - SALE OF POWER PART 1 - GENERAL CHAPTER I - HIGHLIGHTS OF THE SYSTEMS I. GENERAL COVERAGE 1.1 This manual covers systems for raising of demand, collection, accounting for collection and disconnections. 1.2 The system would be applicable to all the billing and collection locations 2. HIGHLIGHTS (1) Uniform Account Codes

Modern world market relations put forward rigorous requirements for conditions of information exchange and implementation of automated systems for commercial accounting and sale of thermal and electric energy. Data collection of the amount of energy consumed is often carried out through manual entry of information, that does not exclude probable errors. ...

Automatic system for commercial accounting of power consumption National Research Tomsk Polytechnic University. According to the purpose ASCAP can be divided into two types: the systems of commercial accounting and technical accounting systems. The commercial accounting - records electricity consumption (as well as gas, water, etc.)

The Automatic Identification System (AIS) is an automatic tracking system used on ships for identifying and locating vessels to avoid collisions. Also, port authorities use AIS to better control sea traffic. myShipTracking is a website that uses this technology in order to provide a better understanding of how vessels move around the world.

There are two core functional units in the system: the power consumption statistics unit and the electricity accounting unit. The former unit obtains the power consumption data of users, and the latter unit completes the centralized accounting of electricity charges combined with the unit price.

A microprocessor-based automatic electricity meter reading system is implemented, which provides cost-effective, reliable and interference free data transfer between remote ...

1. Reefers- Container ships, also, designed to carry reefers, will, of course consume a higher power with the increase in the number of live reefers onboard. Stowage plans must be checked so that reefers requiring ventilation would be carried on open decks. Where placed in cargo holds, efficient usage of reefer cooling water system is a much more economic way than ...

To improve the efficiency of solar panels, the removal of surface contaminants is necessary. Dust accumulation on PV panels can significantly reduce the efficiency and power output of the system by up to 80% [52], [123], [54], [85].Based on the conditions of the accumulated contaminants, different cleaning systems may be employed for removing dust ...

Our barrier gate or boom barriers portfolio includes Access Gates, Parking Barriers, Toll Gates, and Traffic Barriers. Our barrier gates can be integrated with RFID card reading, vehicle detection systems and sensors to recognise vehicles and stop rogue or tailgating entries. Stebilex Systems is a leading supplier for automatic gate barriers in the GCC and the wider middle east.

The importance of installing an automated system. Automatic data collection technology is an effective way to reduce commercial electrical energy losses. The system comprehensively ...

Watt is the unit of power. It means the rate at which a device consumes or produces electricity. For example, a 360-watt semi-automatic washing machine consumes power at a rate of 360 watts per hour, it does not mean that the washing machine consumes 360 units of electricity, it means it will consume power at a rate of 360 watts every hour.

Automatic concentrate dispensers and automatic milking systems (AMS) have been utilized for years, and several manufacturers have introduced automatic feeding systems (AFS).

Energy Accounting software provides real-time cost and usage comparison against on-site generation, power exchange allocation, and spinning reserves while providing power consumption and pricing profiles for reporting purposes.

AD Systems is constantly perfecting the art and functionality of the sliding door, and our innovation continues to be ... automatic. A quick wave or a push of a button signals the AutoMotion(TM) automatic sliding door system to quietly open and close with minimal effort. Safe, quiet and perfect for commercial and institutional applications.

There is a waiting time after which power is cut off for the automatic power shut-off outlet. ... tools and platforms that are conventional in nature can help in the reduction of energy usage associated with commercial

structures by 20-30% averagely and even to a maximum of 40% in selected locations. ... This system monitors power consumption ...

This paper designs a system to reduce the power consumption for individual users in scheduled duration and implements GSM based remote controlling station from where control information consist maximum power consumption and restriction period. In smart grid, advanced metering infrastructure (AMI) is an important task for predicting the power consumption such ...
