

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

What is a battery system?

"batteries" describe energy storage devices that produce dc power/energy. However, in recent years some of the energy storage devices available on the market include other integral components which are required for the energy storage device to operate. The term battery system replaces the term battery to allow for the fact that the battery system includes more than just the battery.
