

Bmw power supply system recall

I received the infamous recall letter from BMW few days back: "Recall Campaign No. 2013-048: Power Supply System"; Can someone chime in if this positive battery cable issue can actually cause fire? Any links floating around? I am trying to see if this recall was the cause of the FIRE that engulf my car this January, 2013. That's right.

Note: This Recall Campaign does not affect M3 or 335d vehicles because of a different power distribution configuration. AFFECTED VEHICLES This Recall Campaign involves E82, E88, E89, E90, E91, E92 and E93 vehicles which were produced March 2007 to October 2011.

October 25, 2024 -- BMW braking and control problems have caused a recall of 11,500 vehicles that could lose their power brakes. In addition, the antilock brake system (ABS) and dynamic stability ...

Replaced the integrated supply module on the weekend. It's found on the passengers side under the cabin air filter. The following problems I think were associated with it: - no start : once and a while the car would not start after pressing the start button. Pressing it again would start the car then. (likelihood - certain)

Chances are that you fault with your entire power steering column. The E85/E86 BMW Z4 is surely the worst BMW model when comes to power steering reliability. The Repair - How to Fix BMW Z4 - Repairing The Power Steering Column - How to Fix. This problem is only fixed by replacing your power steering system or rebuilding it.
