and well-maintained cold chain equipment. Such cold chain equipment, when available at the required cold chain points-in-country, will increase vaccine availability, potency, and safety. This will help to improve immunisation coverage. Some older technologies have high operating costs and/or poor temperature control that can lead to vaccine

Common Risks in Cold Chain Management. Here's how you can keep a close eye -- and temperature -- on sensitive, temperature-controlled assets. Let's start with the riskiest conditions. 1. Equipment Failure. One of the worst nightmares for cold chain businesses is equipment breakdown.

Phase change cold storage technology means that when the power load is low at night, that is, during a period of low electricity prices, the refrigeration system operates, stores cold energy in the phase change material, and releases the cold energy during the peak load period during the day [16, 17] effectively saves power costs and consumes surplus power.

Zhao et al. [] developed a TES system that is suitable for cold chain logistics transportation scenarios based on composite Phase-Change Material (PCM). Lee et al. [] developed a cold storage heat exchanger integrated with an evaporator using PCM, which enabled the cooling function of the vehicle cabin. These studies meet the passive cooling ...

The Cold Chain Technology. Several technologies are closely interacting in a sequential manner to support a cold chain: Monitoring. Devices and systems able to monitor the condition of the cold chain, such as temperature and humidity, throughout all the involved stages, namely in the reefer and at the warehouse.

2.1.1 Perishable products. A cold chain is an essential part of the food products supply chain and more especially when the products are perishable. Perishable foods like cooked, ready to eat, and high-risk foods should keep refrigerated or frozen to preserve until consumption. This category includes some fresh foods such as raw vegetables, raw fruits, raw milk, dairy products, fish, ...

A cold chain management solution is beneficial in increasing the distribution, maintaining the quality of products, and extending the shelf life of products. Assets must always be stored and transported within the required temperature ranges. Companies in the healthcare, pharmaceutical, or food and beverage industry can benefit the most from ...

To close the gaps in medical cold chain storage and distribution for ultra-low temperature, a new generation of equipment is required to increase reliability, reduce energy consumption, introduce green refrigerants, and feature a smaller carbon footprint.
