Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Are mechanical energy storage systems cost-efficient?

The results indicated that mechanical energy storage systems, namely PHS and CAES, are still the most cost-efficient options for bulk energy storage. PHS and CAES approximately add 54 and 71 EUR/MWh respectively, to the cost of charging power. The project's environmental permitting costs and contingency may increase the costs, however.

How much do electric energy storage technologies cost?

Here, we construct experience curves to project future prices for 11 electrical energy storage technologies. We find that, regardless of technology, capital costs are on a trajectory towards US\$340 /MWh for installed stationary systems and US\$175 /MWh for battery packs once 1 TWh of capacity is installed for each technology.

How do we forecast energy storage technologies in 2025?

To forecast those cost and performance parameters out to the year 2025. To annualize the values derived so that the cost of each technology may be fairly compared given their varying life cycles. Along with CT, the following energy storage technologies are evaluated: Ultracapacitors.

How important are cost projections for electrical energy storage technologies?

Cost projections are important for understanding this role, but data are scarce and uncertain. Here, we construct experience curves to project future prices for 11 electrical energy storage technologies.

FESS has a unique advantage over other energy storage technologies: It can provide a second function while serving as an energy storage device. Earlier works use flywheels as satellite attitude-control devices. A review of flywheel attitude control and energy storage for aerospace is given in [159].
