2. SEASONAL SENSIBLE HEAT STORAGE 2.1 Tank thermal energy storage In a tank thermal energy storage (TTES) system, a storage tank which is normally built with reinforced concrete or stainless steel, as shown in Fig 1(a), is buried under the ground fully in case of the heat loss or partially in order to save the excavation fee.

A tank thermal energy storage system generally consists of reinforced concrete or stainless-steel tanks as storage containers, with water serving as the heat storage medium. For the outside of the tank, extruded polystyrene (XPS) is used as an insulation material, and stainless steel is used for the interior to prevent water vapor from spreading.
