What is a safety feature of a PV inverter?

Islanding is the process in which the PV system continues to supply power to the local load even though the power grid is cutoff. A safety feature is to detect islanding condition and disable PV inverters to get rid of the hazardous conditions. The function of inverter is commonly referred to as the anti-islanding.

It is expected that inverters will need to be replaced at least once in the 25-year lifetime of a PV array. Advanced inverters, or "smart inverters," allow for two-way communication between the inverter and the electrical utility. This can help balance supply and demand either automatically or via remote communication with utility operators.
