Is hydrogen available in Slovakia?

Due to the limited use of hydrogen in Slovakia, there has been little by way of private financing to date. However, there is public funding available (national and EU) for the development of renewable energy resources, funded by both the State and European resources. Slovakia is also considering producing low carbon hydrogen using nuclear energy.

When will the first hydrogen fuelling station in Bratislava be operational?

Slovakia is still waiting for hydrogen fuelling infrastructure for fuel cell electric vehicles ("FCEV"), however, the first hydrogen fuelling station in Bratislava is expected to be operational as soon as Autumn 2021 with other major cities following in the foreseeable future as one of the main priorities of the National Hydrogen Strategy.

Should Slovakia use hydrogen as energy carrier?

In its National Hydrogen Strategy (NHS), the Slovak government advocates for using hydrogen as an energy carrier in all its industrial branches and in public life where it is not possible to use electricity directly. The NHS creates a coherent framework for this use.

Why is there no hydrogen fuelling station in Slovakia?

The most significant barrier to the rollout of FCEVs in Slovakia is the absence of a network of hydrogen fuelling stations. The Slovak Ministry of Economy has stated that a basic network of fuelling stations in the main transport hubs and clusters will be built by 2023.

Can Slovakia produce hydrogen from a pressurised water reactor?

With four operational pressurised water reactors in use (a fifth unit is in the construction phase and a sixth in planning), Slovakia expects to produce more nuclear energy than necessary for domestic electricity consumption so could use the excess energy for powering electrolyzers to produce hydrogen.

Does hydrogen reduce primary energy consumption in the Slovak Republic?

According to the National Hydrogen Strategy, the use of hydrogen produced from renewable energy sources can have a positive impact on the reduction of primary energy consumption in the Slovak Republic, compared to conventional heat production in heating plants and cogeneration, under certain conditions.

Hydrogen can be stored as a gas, liquid, or as a part of a solid metal, polymer, or liquid hydride. Studies have indicated that large-scale storage could take place with gaseous hydrogen underground in aquifers, depleted petroleum or natural gas reservoirs, or man-made caverns from mining operations.

"The report focuses on a persistent problem facing renewable energy: how to store it. Storing fossil fuels like coal or oil until it's time to use them isn't a problem, but storage systems for solar and wind energy are still being developed that would let them be used long after the sun stops shining or the wind stops blowing," says Asher Klein for NBC10 Boston on MIT's "Future of ...
