Also see Connecting Crydom MOSFET Output Solid State Relays. Fig. 5. Fig. 5 illustrates the TIP3123 solid state relay, a commercial device. What differs here is the use of two MOSFETs in addition to the photovoltaic opto-coupler circuit. The two output pins are connected to the MOSFET drains. For more on MOSFETs see:

Our solid-state relay range consists of HEXFET[®]; power MOSFET and IGBT output photovoltaic relays plus Photovoltaic and Solid State Isolators that give designers the flexibility to create their own Solid State Relays. Option for Overcurrent, Switch Temperature and Miller Clamp protection are available in the Infineon Solid State Isolators family of products.

Dual Photovoltaic MOSFET Driver Solid State Relay The VO1263AB and VO1263AAC photovoltaic MOSFET driver consists of two LEDs optically coupled to two photodiode arrays. The photodiode array provides a floating source with adequate voltage and current to drive high power MOSFET transistors. Optical coupling provides a high I/O isolation voltage.

Dual Photovoltaic MOSFET Driver Solid State Relay The LH1262CB/CAC Photovoltaic MOSFET Driver consists of two LEDs optically coupled to two photodiode arrays.
