The first part is the power optimizer, which handles DC to DC and optimizes or conditions the solar panel's power. There is one power optimizer per solar panel, and they keep the flow of energy equal. For example, with a standard string inverter, if one solar panel produces less energy, all the solar panels in that string will produce less energy.

I have only a small solar setup.. 3kw..on a townhouse with half the panels east and half west. In the past 15 months I have (a) imported 220kwh from the grid (b) Exported 3520kwh to the grid and (c) Consumed 1,240kwh from the battery. and consumed 1,320kwh straight from solar.

At any rate, what size power inverter would I require and how much power will the inverter use so I can figure out how big of panel to purchase? Yes, 0.2 amps at 110 volts is 22 watts. But I would guess the actual consumption is somewhat less than 22 watts as 0.2 amps would be the absolute maximum.
