As evident from Table 1, electrochemical batteries can be considered high energy density devices with a typical gravimetric energy densities of commercially available battery systems in the region of 70-100 (Wh/kg). Electrochemical batteries have abilities to store large amount of energy which can be released over a longer period whereas SCs are on the other ...

In the past decade, efforts have been made to optimize these parameters to improve the energy-storage performances of MLCCs. Typically, to suppress the polarization hysteresis loss, constructing relaxor ferroelectrics (RFEs) with nanodomain structures is an effective tactic in ferroelectric-based dielectrics [e.g., BiFeO₃ (7, 8), (Bi_{0.5}Na_{0.5})TiO₃ (9, ...
