The value of impedance spectroscopy for in-depth battery cell diagnostics, such as temperature or aging, is currently being demonstrated and recognized by vehicle manufacturers, chip producers, and academia.

Do active dissipative balancing resistors stimulate battery cells for impedance measurement?

Provided by the Springer Nature SharedIt content-sharing initiative Active dissipative balancing systems are essential in battery systems, particularly for compensating the leakage current differences in battery cells. This study focuses on using balancing resistors to stimulate battery cells for impedance measurement.

Can balancing resistors be used for impedance measurements?

Alexander Blömeke and colleagues investigate the conditions under which the balancing resistors in battery systems can be used for impedance measurements. This helps to improve state estimation and results in safer and more sustainable battery systems.

How do you measure a battery impedance?

To extract the impedance, an excitation is necessary. The balancing resistor in the battery system can excite the battery, e.g., with sinusoidal signals. Current and voltage measurements with a decent SNR ne necessary for the impedance measurement. The used hardware and environmental conditions affect the SNR, such as thermal noise.

What is Earth Fault Loop Impedance (EFL)? Earth fault loop impedance refers to the electrical resistance in the earth path of a circuit, measured when a fault occurs between Live conductors and the Earth (Ground). When the Line (Live, Phase, or Hot) wire makes contact with the external metallic body of a machine, an earth fault occurs, and the protective device must trip and ...

DC Loop Resistance is the total resistance through two conductors looped at one end of the link. This is usually a function of the conductor diameter and varies only with distance. This measurement is sometimes done to ensure there are no gross misconnections which can add significant resistance to the link.

The rapid detection of battery parameters is widely used in battery production, market circulation, and maintenance of energy storage system.
