

Energy storage property insurance

Why do you need warranty insurance for your energy storage system?

Our warranty insurance solutions help to secure your sustainable business in the long run. Energy storage systems often involve the complex integration of multiple high-tech components. These are all prone to failure and malfunction, particularly over long periods of ten years and more.

Why do we need reliable energy storage systems?

Renewables like wind and solar energy are intermittent by nature. To successfully master the energy transition, reliable energy storage systems are a must to provide the necessary supply stability.

How long do energy storage systems last?

Energy storage systems often involve the complex integration of multiple high-tech components. These are all prone to failure and malfunction, particularly over long periods of ten years and more. As a manufacturer and system integrator you have to provide your customers with warranties.

What are some examples of energy storage systems?

For example, capacity per unit is not standardised, and is growing on the back of commercial pressures; gravity energy storage systems are now part of the mix, as well as lithium-ion and vanadium technology, and multiple use cases such as grid balancing and stability, or reactive power and load shifting, are common.

But as with all energy systems, it's important brokers and businesses understand the insurance considerations that come alongside battery power systems including how to manage the specific risks they can bring, explains QBE's Chris Deugarde, Risk Engineer and Bob Algie, National Product Specialist, Property. Lithium battery storage systems

With your home battery storage system, your equipment will come with a standard manufacturer's warranty to protect you from any faulty equipment or issues that arise within the first few years. ... Lithium-ion batteries used for solar energy storage generally have a lifespan of around 10 to 15 years. Some high-quality batteries might last ...

According to the U.S. Energy Information Administration, renewable energy sources such as solar and wind are projected to generate 44% of all power in the United States by 2050, increasing the need for battery energy storage systems (BESS). The popularity of BESS is easy to understand: It's renewable, relatively low cost to install, resilient, efficient and quickly ...

Andrew Sinclair, Account Director - Renewable Energy, PIB Insurance Brokers, discusses insurers' concerns surrounding Battery Insurance projects. Insurance Considerations for your Battery Energy Storage Project
There are many ideal risk management features insurers would like to see for any risk they are insuring.

Parametric insurance: How data & technology enable extreme-weather risk cover. Grid-scale battery energy storage systems (BESS) are becoming an increasingly common feature in renewable-site design, grid planning and energy policy. We ...

Battery energy storage systems (BESS) have been in the news after being affected by a series of high-profile fires. For instance, there were 23 BESS fires in South Korea between 2017 and 2019, resulting in losses valued at \$32 million - with the resulting investigation attributing the main causes to system design, faulty installations and inadequate maintenance. 1

The energy landscape is undergoing a profound transformation, with battery energy storage systems (BESS) at the forefront of this change. The BESS market has experienced explosive growth in recent years, with global deployed capacity quadrupling from 12GW in 2021 to over 48GW in 2023.

To add to this, sometimes projects are struggling to "find a home" within insurance companies' underwriting teams. While some insurers have specific teams for renewables, they may not have a wealth of experience with energy storage, so the learning curve is steeper than those who have had a renewables team grow out of conventional energy ...
