What are California's new battery energy storage projects?

The Gateway and Moss Landing projects are just two of the battery energy storage installations being developed across California, a state that has ramped up its use of renewable energy in recent years while phasing out electricity from coal, nuclear, and natural gas-fired power plants.

How many MW does gateway energy storage have?

Gateway Energy Storage is currently energized at 230 MW and is on track to reach 250 MW this month, according to McCarthy. The project was launched and connected to CAISO's grid in June, with an initial 62.5 MW of storage. LS Power said the project reached 200 MW of capacity on Aug. 1, with an additional 30 MW added on Aug. 17.

More advanced variations of CAES such as adiabatic compressed air energy storage (A-CAES) and liquid air energy storage (LAES) are still nascent and in pilot-testing phases. Gravity Energy Storage (GES) is an immature technology that uses established mechanical bulk storage principles, using the potential energy of a mass at a given height.
