Low Energy Density: Compared to other forms of energy storage like batteries, capacitors store less energy per unit of volume or mass, making them less suitable for long-duration energy storage. High Self-Discharge: Capacitors tend to lose their stored energy relatively quickly when not in use, known as self-discharge.

Capacitors are a form of energy storage that uses static electricity to store power instead of chemicals like batteries do. Supercapacitors can do this with extreme efficiency. Our supercapacitors are equipped with two metal plates that act as conductors and accumulate electrical charges, storing energy.
