All the different types of energy storage systems are compared on the basis of 20 technical parameters. The comparison among ESSs is a major subject of analysis before the practical deployment of an ESS. v. At present, ESSs are flourishing in leaps and bounds, as more countries are trying to install increased capacities of ES facility.

How are energy storage systems classified?

Energy storage systems can be classified based upon their specific function, speed of response, duration of storage, form of energy stored, etc. . The classification of ESS based on the form of stored energy is mainly explored here.

How to choose the best energy storage system?

It is important to compare the capacity, storage and discharge times, maximum number of cycles, energy density, and efficiency of each type of energy storage system while choosing for implementation of these technologies. SHS and LHS have the lowest energy storage capacities, while PHES has the largest.
