There are many advantages of geothermal energy. It can be extracted without burning a fossil fuel such as coal, gas, or oil. Geothermal fields produce only about one-sixth of the carbon dioxide ...

Geothermal renewable energy pros and cons

In contrast, most renewable energy sources produce little to no global warming emissions. Even when including "life cycle" emissions of clean energy (ie, the emissions from each stage of a technology"s life--manufacturing, installation, operation, decommissioning), the global warming emissions associated with renewable energy are minimal [].

The main types of renewable energy are wind, solar, hydroelectric, tidal, geothermal and biomass. Read on to discover the pros and cons of each of these renewable energy sources. One of the main benefits of most renewable energy sources is that they don"t release carbon dioxide or pollute the air when they are used to produce electricity or heat.

Geothermal power is "homegrown," offering a domestic source of reliable, renewable energy. Geothermal energy is available 24 hours a day, 365 days a year, regardless of weather. Geothermal power plants have a high-capacity factor--typically 90% or higher--meaning that they can operate at maximum capacity nearly all the time.
