There are four main types of hydrogen energy storage: compressed gas, underground storage, liquid storage, and solid storage. Compressed hydrogen gas is the main type that has been used in fuel ...

Hydrogen can be stored physically as either a gas or a liquid. Storage of hydrogen as a gas typically requires high-pressure tanks (350-700 bar [5,000-10,000 psi] tank pressure). Storage of hydrogen as a liquid requires cryogenic temperatures because the boiling point of hydrogen at one atmosphere pressure is -252.8°C.
