Storing energy in your home brings incredible benefits, but how does it work? Energy storage works by pulling power from solar panels or the National Grid into the home battery systems, which then charges the battery. Once this energy is needed in the home, the battery discharges the energy to power the home.

How do battery energy storage systems work? Simply put, utility-scale battery storage systems work by storing energy in rechargeable batteries and releasing it into the grid at a later time to deliver electricity or other grid services. Without energy storage, electricity must be produced and consumed at exactly the same time.

First-quarter 2018 sales figures underscore this market's trajectory. In total, the United States added 126 megawatt-hours (MWh) of energy-storage capacity during that time, a 26 percent increase over the previous quarter, according to the Q1 2018 U.S. Energy Storage Monitor report from GTM Research and the Energy Storage Association.
