The force on a flywheel increases with speed, and the energy a wheel can store is limited by the strength of the material from which it's made: spin a flywheel too fast and you'll eventually reach a point where the force is so great that it shatters the wheel into fragments. Strong, lightweight materials turn out to be the best for flywheels ...

A megawatt-hour (MWh) is the unit used to describe the amount of energy a battery can store. Take, for instance, a 240 MWh lithium-ion battery with a maximum capacity of 60 MW. Now imagine the battery is a lake storing water that can be released to create electricity. A 60 MW system with 4 hours of storage could work in a number of ways:

I've seen quite a lot 8215/8200 on AliExpress but not quite sure about the quality. I've only been using 2813 to build my watches so far. Ive bought 5 2813 movements with massive variations of looks and quality, but they're all still noisy and cheap feeling.

The 21 jewel 8200 automatic movement (21,600 bph) was first produced around 1975, and by the end of the 1970s it had become Citizen's standard automatic, as the range of mechanical watches was massively reduced as a result of the quartz revolution. Although the majority of 8200's you'll see are 21 jewels, they were also made with 17 jewels...

If you pick up a textbook from the floor and put it on a table, it will require about 10 joules of energy--a unit where $1 \text{ J} = 1 \text{ kg} \cdot \text{m}^2 / \text{s}^2$. We can calculate the change in energy by lifting ...
