

# How much solar energy is used in the world

Globally, solar PV electricity generation is expected to increase by 145 TWh, almost 18%, to approach 1 000 TWh in 2021. We expect hydropower generation to increase further in 2021 through a combination of economic recovery and new capacity additions from large projects in ...

How much solar energy does the world use? The latest available figures show that the world used 856 TWh (terawatt hours) of solar energy in 2020. The solar energy production figures have also risen over the last decade, in line with capacity.

21 hours ago&#0183; Global solar capacity has reached a record 2 terawatts (TW) of capacity, with more added in the last two years than the previous 68 combined, exclusive data from the sector's global industry group ...

We estimate that total global use of renewable energy will rise by about 1% in 2020. Despite supply chain disruptions that have paused or delayed activity in several key regions, the expansion of solar, wind and hydro power is expected to help renewable electricity generation to rise by nearly 5% in 2020.

The global installed solar capacity over the past ten years and the contributions of the top fourteen countries are depicted in Table 1, Table 2 (IRENA, 2023). Table 1 shows a tremendous increase of approximately 22% in solar energy ...

Solar energy is the most widely available energy resource on Earth, and its economic attractiveness is improving fast in a cycle of increasing investments. Here we use data-driven conditional...
