New to the game, and read some on logistics. But these things seem odd to me. I can increase volume....but I can only fit pretty much the same amount of stuff inside as I would any other singular cargo box. So how are these controllers and their expansion boxes any different from a normal single modular container? Any anyone explain at a noob level how I can use these to ...

Add in 7 cargo boxes and you can get to a perfect cube of 64 blocks. This works very well for a cargo bay situation. Imagine a room two high. 4x4x4 means you can use the upper and lower layer as part of the floor and ceiling. This leaves room for a cargo controller box and 7 containers (ceiling) BBBB CBBB (floor) C= container controller, B ...
