

The environmental profiles of photovoltaic (PV) systems are becoming better as materials are used more efficiently in their production, and overall system performance improves. Our analysis details the material and energy inventories in the life cycle of high-concentration PV systems, and, based on measured field-performances, evaluates their energy payback times, ...

In this study, the origin of the fill factor (FF) in lead-halide perovskite solar cells is discussed based on different thicknesses of 2,2',7,7'-tetrakis(N,N-di-p-methoxyphenylamine)-9,9-spirobifluorene (spiro-OMeTAD) as the hole-transporting layer (HTL). As the thickness of HTL is decreased, FF increases and hence, the photovoltaic performance is also improved. This is ...

Hyung Do Kim We revisit the idea of generating the Higgs μ parameter through a spontaneously broken Peccei-Quinn (PQ) symmetry in a gauge-mediated supersymmetry breaking scenario.

Dimas Mar 12 2019 4:25 am I really am impressive how work hard you had done with those amazing tv show " somehow 18/ 18 again" . Please season 2~ i really need that, i loveeeeeeee this drama so much!! i can see chemistry about minho and yoobi. they're so cute. fyi, my 2008 liner sister crying cuz in the end minho saved nabi.

Ohkita, Xinlei Tao, Biaobing Wang, Surf. Interfaces, 52, 104879_1-15 (202 4). DOI: 10.1016/j.rfin.2024.104879 24-0 8 " Photon Energy Loss in Ternary Polymer Solar Cells Based on Nonfullerene Acceptor as a Third Component ""',

Organic-inorganic perovskite solar cells based on tin halides exhibit a small open-circuit voltage (VOC) because of a large photon energy loss from band-gap energy, as large as 0.8-1.0 eV.

Perovskite solar cells exhibit improved photovoltaic parameters with increasing perovskite grain size. The larger photocurrent is due to the enhanced absorption efficiency for ...

Hyung Chul Kim The environmental profiles of photovoltaic (PV) systems are becoming better as materials are used more efficiently in their production, and overall system performance improves.

Hyung Do Kim is an Assistant Professor in the Department of Polymer Chemistry at Kyoto University. He received his Ph. D. degree at Kyoto University in 2017. His thesis focused on development of highly efficient organic-inorganic hybrid solar cells. He worked as a JSPS postdoctoral fellow in the same university from 2017 to 2018 and appointed ...
