

Does Iraq have a good power sector?

As a major producer, Iraq's electricity sector is almost entirely dependent on fossil fuels, which account for more than 80% of power generation. Despite its vast energy resources, the performance of the country's power sector is sub-optimal.

How has war affected Iraq's power infrastructure?

Despite the extraordinary challenges of war in recent years, Iraq has made impressive gains, nearly doubling the country's oil production over the past decade. But the turmoil has also undermined the country's ability to maintain and invest in its power infrastructure.

How much oil does Iraq produce a day?

It also takes a detailed look at the country's oil and gas sector, projecting that Iraq's oil production will grow by 1.3 million barrels a day by 2030, becoming the world's fourth-largest oil producer behind the United States, Saudi Arabia and Russia.

Will Iraq's oil production increase if water availability increases?

One impending barrier is the availability of water, as planned oil production will require a level of water production above what has been achieved so far. Assuming an increase in water availability, Iraq's production to 2030 grows by around 1.3 mb/d, making it the third largest contributor to global oil supply in that time.

What are the challenges facing Iraqi oil production?

The increase in Iraqi oil production capacity over the last decade has been impressive, yet there are a number of challenges facing the sector going forward. One impending barrier is the availability of water, as planned oil production will require a level of water production above what has been achieved so far.

Various topics such as CO₂ emissions, industry, human activities, and electricity distribution grids have attracted considerable attention because of the current state of crude oil production.
