

The waxing gibbous moon will be 97%-illuminated, which will make the night sky less than dark. Find Venus and Arcturus; the comet will be just above halfway along an imaginary line drawn between them.

The ZHR value refers to the Zenithal Hourly Rate, i.e. the average number of meteors an individual observer could see in an hour, assuming perfectly dark sky conditions. This number is an estimate, the number an observer could see in real conditions depends on the actual intensity of the shower (which can be highly variable) and on the sky conditions.

What's Up: November 2024 Skywatching Tips from NASA. This month, catch planetary views of Saturn, Jupiter, and Mars, witness a close pass of the Parker Solar Probe by Venus, and get ready for an occultation of the bright star Spica ...

The Star Atlas shows a 360 degree view of the night sky for any given location and time up to an elevation of 60 degrees. The application shows stars down to a magnitude of 5 along with all the planets. ... in a 360 degree circle of the sky. Clicking on a star or planet will reveal further information about it. Click the clock (or press T) to ...

"Tonight's Sky" is a monthly video of constellations you can observe in the night sky. The series is produced by the Space Telescope Science Institute, home of science operations for the Hubble Space Telescope, in partnership with NASA's Universe of Learning.

2 days ago; While the best phases for viewing the Moon are the First Quarter and Last Quarter, the best lunar phase for night sky observations is the New Moon. During the New Moon, our natural satellite appears as a darkened disc in the sky, invisible to the naked eye; it also rises and sets with the Sun. So the sky is dark and free of moonlight all night.

What was the bright object I saw in the sky last night? Is it a star, is it a planet or is it a plane? A handy guide to identifying that bright object you saw last night. The chances are it's Jupiter or Venus (or just occasionally Mars). Planets will appear to move across the sky as the Earth ...

1 day ago; Last Night's Moon, 11-08-24 - posted in Lunar Observing and Imaging: Last Nights Moon 10-11-24 Ten 2 and 1/2 minute videos, with 8/ EdgeHD, ASI533MC Pro, Celestron .7 reducer, UV/IR filter, AutoStakkert, WaveSharp and Microsoft ICE. One of the videos was off and hurt the mosaic. I left it in as removing it left a gap. I included several individual images.
