Are lithium-ion batteries the future of energy storage?

1. Introduction Lithium-ion batteries formed four-fifths of newly announced energy storage capacity in 2016, and residential energy storage is expected to grow dramatically from just over 100,000 systems sold globally in 2018 to more than 500,000 in 2025 .

What materials are in lithium ion batteries?

In 2016, 89% of lithium-ion batteries contained graphite (43% artificial and 46% natural), 7% contained amorphous carbon (either soft carbon or hard carbon), 2% contained lithium titanate (LTO) and 2% contained silicon or tin-based materials. [118]

How many types of cathode materials are there in lithium ion batteries?

There are three classes of commercial cathode materials in lithium-ion batteries: (1) layered oxides, (2) spinel oxides and (3) oxoanion complexes. All of them were discovered by John Goodenough and his collaborators. [82] LiCoO_2 was used in the first commercial lithium-ion battery made by Sony in 1991.
