```
Log      name      system      source      microsoft
windows kernel power
```

Applies to: Windows Server 2016 Original KB number: 4043839. Symptoms. After you change the power policy for a Windows Server 2016-based server, you receive event ID 37 in the System log: Event ID 37 Source: Microsoft-Windows-Kernel-Processor-Power Type: Warning Description: The speed of processorx in group y is being limited by system firmware.

Also, my computer crashed again while playing Battlefield 1. I checked the report log and I noticed that a few things were different than the one I originally submitted, specifically the `PowerButtonTimestamp` and the `BootAppStatus`. Does this mean anything or is it still most likely the PSU? System - Provider [ Name] Microsoft-Windows-Kernel-Power

Log Name: System Source: Microsoft-Windows-Kernel-Power Date: 25/7/2556 21:02:32 Event ID: 41 Task Category: (63) Level: Critical

Hi and thanks for reaching out. My name is William, I'm an Independent Advisor. I'll be happy to help you out today. The event &quot;The kernel power manager has initiated a shutdown transition.&quot; is expected. This simply indicates the computer has entered into a shutdown phase, usually a result of pressing the power button.

This post offers the most suitable solution to this issue. The symptoms are that your computer restarts and a critical error message is logged in the event log: Log Name: System Source:...

Log Name: System Source: Microsoft-Windows-Kernel-Power Date: 1/05/2019 7:21:20 PM Event ID: 41 Task Category: (63) Level: Critical Keywords: (70368744177664),(2) User: SYSTEM Computer: DESKTOP-SMA156I Description: The system has rebooted without cleanly shutting down first.
