The bidding volume of energy storage systems (including energy storage batteries and battery systems) was 33.8GWh, and the average bid price of two-hour energy storage systems (excluding users) was ¥1.33/Wh, which was 14% lower than the average price level of last year and 25% lower than that of January this year.

Dramatic cost declines in solar and wind technologies, and now energy storage, open the door to a reconceptualization of the roles of research and deployment of electricity ...

Na₃V₂(PO₄)₂F₃ attracts lots of attention due to its high plateau, three-dimensional ion diffusion channel and small volume deformation. However, it suffers from low intrinsic electrical conductivity. To improve the electrochemical performances, carbon incorporation is a common way. Interestingly, an unknown plateau at 3.4 V vs. Na/Na⁺ usually appears in ...

The nanomaterials for energy storage include: cathode and anode in lithium ion batteries and sodium ion batteries, thermal storage devices. To understand the nanomaterials, Chen's main approach is applying transmission electron microscopy (TEM), especially in situ TEM, on chemical, electrical, thermal, and mechanical properties of nanomaterials.

In particular, the lithium phosphates and lithium ternary fluorides, which have high oxidation limits, are promising solid-state chemistries stable with high-voltage cathodes. ...
