Using gravity to store energy. Say the grid temporarily has more renewable energy than it needs -- the wind is blowing, the sun is shining, and there's not enough demand to make use of it.

The cheapest way to store solar energy is typically through the use of solar batteries, such as Tesla's Powerwall or LG's Chem RESU. Using net metering or a solar-plus-storage system can also be cheap and effective methods. Costs can depend on local energy prices, available incentives, your specific needs, and the quality of the system.

Several innovative methods have emerged that help to store solar energy without batteries: 1. Gravity-Based Energy Storage. Energy Vault company has designed a mechanism in which energy produced during peak renewable power is used to elevate bricks by lifting mobile masses into a tower. These elevated bricks store potential energy, similar to ...

The key reason they can store so much energy is that they use oxygen, drawn from the air, in place of some of the chemical reactants used along with lithium in their lithium ion cousins. The stored power in electric cars, or anywhere on the grid, might not come from batteries

Energy start-ups around the world have begun using gravity as an alternative form of clean energy storage. It may help mitigate the disadvantages of other energy storage techniques, some of which have become environmental issues in themselves despite all being part of the shift away from fossil fuels. -- The Rise In Renewable Energy
