

The study investigates the impact of Phase Change Material (PCM) and nano Phase Change Materials (NPCM) on solar still performance. PCM and a blend of NPCM are placed within 12 copper tubes ...

High-temperature polymer dielectrics with high energy density are urgently needed for capacitive energy storage fields. However, the huge conduction loss at elevated temperatures makes the capacitive performance of polymers degrade sharply, limiting the application of them. Herein, the polymer dots (PDs) with high-electron-affinity were introduced into high-temperature polymers ...

At a high scan rate of 2 V s^{-1} , this linear relationship is still maintained within a mass loading range of $0.5\text{-}6.6 \text{ mg cm}^{-2}$ (Fig. 3g), indicating fast ion diffusion and high-efficiency ...

This nano-micro engineering results in a high energy density of 13.5 J cm^{-3} together with a large efficiency of 90% in the MLCC with $x = 0.15$. The MLCC also exhibits excellent temperature and frequency stability, where the variations in energy density are just 1% ($20\text{-}120 \text{ }^\circ\text{C}$) and 2% ($1\text{-}100 \text{ Hz}$), respectively.

As the world's energy demand continues to grow, the development of more efficient and sustainable technologies for generating and storing energy is becoming increasingly important. According to Dr. Wade Adams from Rice University, energy will be the most pressing problem facing humanity in the next 50 years and nanotechnology has potential to solve this issue. [1]

As a result, the nanocomposite films exhibited an impressive discharged energy density of 18.2 J/cm^3 along with a remarkably enhanced energy storage efficiency of 70 % near the high electrical breakdown strength of 594.7 MV/m when the fillers content was 3 wt%, which was far surpassed the pristine PVDF ($U_d = 5.34 \text{ J/cm}^3$ and $\eta = 51.8 \%$...

Electrostatic capacitors with the fastest charge-discharge rates and the highest power densities among the electrical energy storage devices are essential for advanced pulsed power systems and electrical propulsions [1,2,3,4,5]. Polymers are preferred dielectrics for high-energy-density capacitors because of their inherent advantages including high breakdown ...

Liberated hydrogen released from LiH would also be highly favorable for maintaining a reductive atmosphere for prelithiation of SiO. Dehydrogenation-driven lithiation of SiO exploiting LiH made three-dimensionally networked Si-lithium silicate nanocomposites possible, which delivered a 1203 mAh g^{-1} with a high ICE of up to 90.5% with highly stable ...

Nano Energy. Volume 123, May 2024, 109394. Review. ... (Nb_{0.85}Ta_{0.15})_{1/3}O₃ layers to provide high breakdown strength and high energy storage efficiency, respectively. The simulated results indicated that the

branches of breakdown paths always appear in the interface of the above two layers, which plays an important role in enhancing the ...

Phase-change materials (PCMs) are becoming more widely acknowledged as essential elements in thermal energy storage, greatly aiding the pursuit of lower building energy consumption and the achievement of net-zero energy goals. PCMs are frequently constrained by their subpar heat conductivity, despite their expanding importance. This in-depth research ...

The nanolaminate, consisting of nanoconfined polyetherimide (PEI) polymer sandwiched between solid Al_2O_3 layers, exhibits a high energy density of 18.9 J/cm^3 with a high energy efficiency of $\sim 91\%$...

Nevertheless, the bottleneck of energy storage density is hard to break because of the sacrificial balancing act of inversely correlated P and E_b . Further enhancement of the energy storage density of BTO-based bulks remains a big challenge due to the intrinsic low dielectric breakdown strength, high P_r , and low efficiency. 16

Solar energy is a clean and inexhaustible source of energy, among other advantages. Conversion and storage of the daily solar energy received by the earth can effectively address the energy crisis, environmental pollution and other challenges [4], [5], [6], [7]. The conversion and use of energy are subject to spatial and temporal mismatches [8], [9], such as ...

These nanotechnology-led advancements, ranging from TRL 1 to 4, paved the way for the development of large-format LFP-based Li-ion cells for higher TRLs, a solution also adopted by BYD, an ...

The energy devices for generation, conversion, and storage of electricity are widely used across diverse aspects of human life and various industry. Three-dimensional (3D) printing has emerged as ...

Here, an ultrahigh energy storage density of $\sim 13.8 \text{ J cm}^{-3}$ and a large efficiency of $\sim 82.4\%$ are achieved in high-entropy lead-free relaxor ferroelectrics by increasing configuration entropy, named high-entropy strategy, realizing nearly ten times growth of energy storage density compared with low-entropy material.

Herein, a design of flexible triboelectric generator integrated with high-efficiency energy storage unit (FTEG-ES) is proposed. The power generation unit is a flexible triboelectric generator (FTEG). Natural rubber and polyethylene terephthalate (PET) release film with silicone oil on the surface are used as the friction layer, and the ...

That is to say, even with the efficiency as high as 85% and the energy storage density of about 10 J/cm^3 , the dissipated power density of the dielectric capacitor still looks high. If the energy storage density reaches 15 J/cm^3 , to maintain the same dissipated power the efficiency has to be 89.45% which means that higher energy storage ...

This comprehensive review explores the transformative role of nanomaterials in advancing the frontier of

hydrogen energy, specifically in the realms of storage, production, and transport. Focusing on key nanomaterials like metallic nanoparticles, metal-organic frameworks, carbon nanotubes, and graphene, the article delves into their unique properties. It scrutinizes ...

The fuel cell with the above H₂ and O₂ reaction has huge potential for clean energy production via energy conversion efficiencies with zero carbon emissions. The efficiency of fuel cells for water splitting entirely depends on the efficient electrode material. HER overall consists of adsorption, reduction, and desorption reaction steps over the surface of the ...

Transparent and stretchable high-output triboelectric nanogenerator for high-efficiency self-charging energy storage systems. Author links open overlay panel Kequan Xia a 1, Yang Tian b 1, Jiangming Fu a, ... Nano Energy, 57 (2019), pp. 851-871. View PDF View article View in Scopus Google Scholar [2] R.

Guo, M. et al. High-energy-density ferroelectric polymer nanocomposites for capacitive energy storage: enhanced breakdown strength and improved discharge efficiency. Mater. Today 29, 49-67 (2019).

Abstract Advanced lead-free energy storage ceramics play an indispensable role in next-generation pulse power capacitors market. Here, an ultrahigh energy storage density of ~ 13.8 J cm⁻³ and a large efficiency of ~ 82.4% are achieved in high-entropy lead-free relaxor ferroelectrics by increasing configuration entropy, named high-entropy strategy, realizing nearly ...

Future electronic devices toward high integration and miniaturization demand reliable operation of dielectric materials at high electric fields and elevated temperatures. However, the electrical deterioration caused by Joule heat generation remains a persistent challenge to overcome. Here, the solution-processed polyimide (PI) nanocomposites with ...

The saturation voltage, which is the highest achievable voltage of the energy storage unit, is much smaller than the open-circuit voltage of the TENG, resulting in a low energy-storage efficiency ...

At 90 % of energy efficiency, the discharge energy density of 5PI + 4TiO₂ (1.03 J cm⁻³) is about 180 % of that of PI (0.57 J cm⁻³). The 5PI + 4TiO₂ sample possess the desirable high-temperature energy storage performance compared with the current pure high-temperature polymer, as depicted in the Fig. 6 (f) [32].

This study demonstrates exceptionally high nanomechanical energy storage, surpassing that of LIBs, in twisted SWCNT ropes. However, longer SWCNT ropes suffer from reduced energy storage capacity...

In today's world, carbon-based materials research is much wider wherein, it requires a lot of processing techniques to manufacture or synthesize. Moreover, the processing methods through which the carbon-based materials are derived from synthetic sources are of high cost. Processing of such hierarchical porous carbon materials (PCMs) was slightly complex ...
