Our findings substantiate that: (i) CO<sub>2</sub> emissions have unconditional negative effects on human development and economic growth; (ii) the net impacts on human development and economic growth are positive from the interplay between renewable energy and CO<sub>2</sub> emissions, i.e. renewable energy reduces the influences of per capita CO<sub>2</sub> emissions on ...

Among various renewable energy technologies, solar power generation is the most common and well-known technology and has been actively applied worldwide (Rezk et al., 2019; Iqbal et al., 2021). Other than solar energy systems, renewable energy resources like wind, geothermal, and biomass energy systems have been getting good attention and promising ...

IRENA's statistics report of 2019 has reported that renewable energies, in general, have seen a 7.4% growth in capacity with a net capacity increase of 176 GW in 2019, out of which 54% being installed in Asia alone, with 90% of it being new capacities of solar and wind energies (IRENA, 2020a; IRENA, 2020b). Renewable energies are dominating the new power ...

Sustainable development requires a transition from fossil fuel dependency to cleaner energy sources. This transformation's key component is renewable energy, which promises fewer negative environmental effects (Osman et al. 2022) is crucial to highlight the extent to which the developing world has contributed to the population explosion, which has ...

For more than 30 years, research funded by the Wind Energy Technologies Office has addressed wind energy's effects on wildlife and the environment. ... Through the National Renewable Energy Laboratory (NREL), WETO has supported BWEC since its inception.

Conventional energy source based on coal, gas, and oil are very much helpful for the improvement in the economy of a country, but on the other hand, some bad impacts of these resources in the environment have bound us to use these resources within some limit and turned our thinking toward the renewable energy resources. The social, environmental, and ...

Renewable energy development, such as solar and wind energy, is growing in the United States and is expected to continue expanding for the foreseeable future. However, renewable energy infrastructure can be a risk to some wildlife including threatened and endangered species. ... Although negative effects of oil and gas
