

Can battery storage be used with solar photovoltaics in Zambia?

The Zambian regulation foresees customs duty and VAT exemptions for most equipment used in renewable energy or battery storage projects. Detailed information is provided in In this section, we discuss the opportunity of battery storage in combination with solar photovoltaics from a financial point of view.

What are the different types of solar energy technologies in Zambia?

There are two main types of solar energy technologies: photovoltaic (PV) and concentrating solar power (CSP). Photovoltaics have high potential in Zambia, and this technology is discussed in this Chapter. CSP technology is not expected to be implemented in Zambia.

How is theoretical photovoltaic power production calculated in Zambia?

Theoretical photovoltaic power production in Zambia has been calculated using numerical models developed and implemented in-house by Solargis. As introduced in Chapter 2.1, 15-minute time series of solar radiation and air temperature, representing last 24 years, are used as an input to the simulation.

Will photovoltaic technology be implemented in Zambia?

Photovoltaics have high potential in Zambia, and this technology is discussed in this Chapter. CSP technology is not expected to be implemented in Zambia. Photovoltaic technology exploits global horizontal or tilted irradiation, which is the sum of direct and diffuse components (see Equation (1) in Chapter 2.1.3).

Is Zambia a good country for photovoltaic energy?

The country's average daily PV electricity output ranges between 4.54 and 4.85 kWh/kWp, equating to average annual totals of 1658 to 17172 kWh/kWp from the country's six hydropower reservoirs. Indeed, Zambia is one of the countries with a high potential for photovoltaic energy generation; the following have been noted:

Which data layers were used for spatial analysis of solar resource in Zambia?

Final corrected GHI and DNI data layers were used for spatial analysis of solar resource in Zambia, and for calculation of secondary data layers: diffuse horizontal irradiation (DIF), global radiation on optimally tilted surface (GTI) and potential photovoltaic production (PVO_{OUT}).
