

Picture of all the planets in order

Mercury is the first planet in our solar system. It is the closest planet to the Sun, located at an average distance of 36 million miles (58 million kilometres) from our star cause this small planet is so close to the Sun's harmful solar winds, it ...

Buy high quality Planet Photos of Mercury, Mars, Venus, Earth, Mars, Jupiter, Uranus, Neptune, Pluto, Charon, Sedna, and, of course the Pale Blue Dot. See over 3,000 pictures at the JPL/NASA PhotoJournal website. Write down the "PIA" image number and order a custom image.

This is a simple guide to the sizes of planets based on the equatorial diameter - or width - at the equator of each planet. Each planet's width is compared to Earth's equatorial diameter. There's also a handy list of the order of the planets moving away from our Sun. Size Up the Planets

Our solar system is made up of a star--the Sun--eight planets, 146 moons, a bunch of comets, asteroids and space rocks, ice, and several dwarf planets, such as Pluto. The eight planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Mercury is closest to the Sun. Neptune is the farthest.

The Solar System [d] is the gravitationally bound system of the Sun and the objects that orbit it. [11] It formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, forming the Sun and a protoplanetary disc. The Sun is a typical star that maintains a balanced equilibrium by the fusion of hydrogen into helium at its core, releasing this energy from its ...

The planets in order from the Sun are based on their distance: Mercury, Venus, Earth (aka mother earth), Mars, Jupiter (father sky), Saturn, and Uranus with Neptune to round out at number 8! The solar system is an amazing place and there are plenty of planets to explore.

Picture of all the planets in order

Question: What is the order of the planets in the Solar System? Answer: The planets in the Solar System are arranged in the following order: Starting with the planet closest to the sun, we have Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. In 2006, Pluto was demoted from "planet" status to "dwarf planet" status. This leaves us with eight planets instead of nine.
