4 days ago; Sky Tour Podcast. November's night skies feature a cluster of prominent constellations led by a celestial queen. Our guided audio tour tells you how to identify them, along with tips for spotting all five bright planets and three meteor showers.

It's setting by the time the sky is fully dark. Saturn is visible toward the southeast as soon as it gets dark out, and sets by dawn. Mars rises around midnight all month. By dawn it has climbed quite high into the south-southeastern sky, appearing together with Jupiter. Now, Jupiter is rising in the first half of the night.
