Unit) TMEIC is developing a 2.5 MW Energy Storage System inverter. This highly efficient Bi-Directional inverter is based on our award-winning Solar Ware's Samurai design. Release is planned for October 2018. A wide voltage range of 750Vdc~1250Vdc maximizes battery operating range, and allows full battery storage potential to be achieved.

What is a solar string inverter?

Solar string inverters are used to convert the DC power output from a string of solar panels to a usable AC power. String inverters are commonly used in residential and commercial installations. Recent improvements in semiconductor technology is allowing for string inverters with high power density (from 10s of kW to 100s of kW).

What is a power inverter?

All trademarks are the property of their respective owners. Power inverter is a device that converts electrical power from DC form to AC form using electronic circuits. Its typical application is to convert battery voltage into conventional household AC voltage allowing you to use electronic devices when an AC power is not available.

Can solar string inverters save energy?

A lot of research and development is occurring in power conversion associated with solar string inverters. The aim is towards preserving the energy harvested by increasing the efficiency of power conversion stages and by storing the energy in distributed storage batteries.

Can a string inverter use an 800-v battery for storage?

Systems with higher power range of string inverters could use 800-V battery for storage. The common topologies for the bidirectional DC/DC power stage are the CLLC converter and the Dual Active Bridge (DAB) in isolated configuration. In non-isolated configurations, the synchronous boost converter can be used as a bidirectional power stage.
