

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges (or collects energy) from the grid or a power plant and then discharges that energy at a later time to provide electricity or other grid services when needed.

What is the power of a storage system?

The power of a storage system,  $P$ , is the rate at which energy flows through it, in or out. It is usually measured in watts (W). The energy storage capacity of a storage system,  $E$ , is the maximum amount of energy that it can store and release. It is often measured in watt-hours (Wh). A bathtub, for example, is a storage system for water.
