When the replacement yoke is plugged in, Windows 10 recognizes it but a couple of seconds later the connection is broken: the device icon disappears and the yoke clock and throttle quadrant LED go dark. This power on/power off sequence continues forever. After some experimentation discovered that the yoke acts differently between USB 2 and 3.

I attempted to use the Multi-Panel plugged into the hub on the Pro Cessna yoke, doing so without a separate power supply for the yoke/hub. The Multi-Panel lit up nicely, and worked fine until perhaps 30 to 40 minutes into a flight, at which time it would go dark. So I ordered the Saitek power supply from Amazon.

Although your Pro Flight Yoke system includes an AC power input socket, it will function correctly just by plugging the USB cable into your PC since the USB connection supplies enough power. However, if you are plugging multiple high power USB devices into the yoke's USB ports your yoke system may need additional power.

Hi @maxxxis47, welcome to the forum.I can't help much other than to say my Saitek Pro yoke system works fine, I know that doesn't help you much, but it might be worth disconnecting, and reconnecting the main Yoke once your in the sim(i assume you have the throttles directly connected to the yoke) t.
