And i have yet to figure it out. My light comes on then off that says "reduced engine power. And then the check engine light comes on. Now get this after i turn the key off for awhile the reduced engine power light goes off but the check engine light stays on . Theres more i have seen the check engine light go off as well.

yesterday was out driving all of a sudden in the middle of a hill the car would not move. next thing I know I get the good old reduced engine power, system stability messages and the TC light on the dashboard lit up. Could not get the car to go any further up the hill was stuck in the middle had to call a tow truck.

The GMC Reduced Engine Power problem refers to a situation where the vehicle's engine power is significantly reduced, causing a decrease in acceleration and overall performance. This issue often occurs due to a fault in the vehicle's electronic throttle control system, which is responsible for managing the engine's power output.

The reduced engine power is because of a problem with the electronic throttle control system or as GM calls it TAC system . Reduced Engine Power Mode When the PCM detects a condition with the TAC system, the

Reduced engine power stability system disabled

PCM may enter a reduced engine power mode. Reduced engine power may cause one or more of the following conditions:
