Are energy-saving refrigerator purchases influenced by supply and demand sides?

The promotion of energy-saving household appliances is important to save energy and reduce emissions to realize peak carbon dioxide emissions and carbon neutrality. The objective of this study is to evaluate the influencing factors of energy-saving refrigerator purchases from the supply and demand sides.

What is the efficiency indicator for a refrigeration cycle?

The efficiency indicator for a refrigeration cycle is the coefficient of performance (COP), which is defined as the heat absorbed from the cooled space divided by the work input in the compressor:
$$\text{COP} = \frac{Q_L}{W}$$
 This can also be expressed as
