Legislative and voluntary political actions in Europe call for a reduction of CO₂ emissions of a manufacturer's vehicle fleet, rather than for iconic niche products. Micro-hybrids offer, at lowest absolute fuel or CO₂ savings, still the best cost/benefit ratio among all hybrid concepts (Fig. 3). If applied in large volumes, they may offer the best leverage for fleet CO₂ ...

Fuel Cells as an energy source in the EVs. A fuel cell works as an electrochemical cell that generates electricity for driving vehicles. Hydrogen (from a renewable source) is fed at the Anode and Oxygen at the Cathode, both producing electricity as the main product while water and heat as by-products. Electricity produced is used to drive the ...
