Quantum photoelectrochemistry calculation of photoinduced interfacial electron transfer in a dye-sensitized solar cell. Solar energy conversion describes technologies devoted to the transformation of solar energy to other (useful) forms of energy, including electricity, fuel, and heat. [1]

The photovoltaic effect is used by solar panels to convert solar energy into electrical energy. When particles of sunlight (photons) hit the solar panel's semiconductor material, they knock electrons free from atoms, creating a flow of electrons. This flow is captured by solar panels and turned into a usable electric current.
