

Is a rule-based peak shaving control strategy optimal for grid-connected photovoltaic (PV) systems?

In this article, an optimal rule-based peak shaving control strategy with dynamic demand and feed-in limits is proposed for grid-connected photovoltaic (PV) systems with battery energy storage systems. A method to determine demand and feed-in limits depending on the day-ahead predictions of load demand and PV power profiles is developed.

Can solar power be used as a peak shaving power station?

Solar power generation with thermal energy storage (TES) can be decoupled from the power grid, which makes the power station itself flexible, and hence, can be endowed with the role of a peak shaving power station to absorb more wind and PV power by the grid [1].

What is the load mode of peak regulation?

In the load mode of peak regulation, EH needs to meet operational constraints. The energy storage of TES should be within a reasonable range.

Can a concentrated solar power plant with an electric heater join peak regulation?

Therefore, a concentrated solar power (CSP) plant equipped with an electric heater (EH) is implemented to join the peak regulation, and the joint peak regulation strategy between thermal power units (TPUs) and a CSP plant is proposed. Firstly, the peak regulation principle of a CSP plant with EH is analyzed in detail.

Does energy storage demand power and capacity?

Fitting curves of the demands of energy storage for different penetration of power systems. Table 8. Energy storage demand power and capacity at 90% confidence level.

What is dynamic regulation in battery energy storage system?

2.2. Dynamic Regulation Dynamic regulation is a bidirectional frequency control strategy. The battery energy storage system actively adjusts its output power within 1 s based on the grid frequency state, instantaneously compensating for active power to achieve grid frequency stability.

Due to its high efficiency and compactness, the S-CO₂ cycle was initially applied in solar power plants and nuclear power plants. Li et al. [3], Xu et al. [4] and He et al. [5] summarized the development trend of the S-CO₂ cycle. They prospected the application prospect of the S-CO₂ cycle especially in the solar and nuclear fields. For the solar energy, He et al. [6], ...

Furthermore, energy efficiency improvement was also considered when the peak load was reduced (Yilmaz et al., 2020). The impacts of three policies for peak load shaving including load-side management, energy storage integration, and electric vehicle development were discussed in Uddin et al. (2018).

To address this, an effective approach is proposed, combining enhanced load frequency control (LFC) (i.e., fuzzy PID- $T \frac{I^{\lambda}}{D^{\mu}}$) with controlled energy storage systems ...

In this article, an optimal rule-based peak shaving control strategy with dynamic demand and feed-in limits is proposed for grid-connected photovoltaic (PV) systems with ...

Battery Energy Storage System (BESS) can be utilized to shave the peak load in power systems and thus defer the need to upgrade the power grid. Based on a rolling load forecasting method, along with the peak load reduction requirements in reality, at the planning level, we propose a BESS capacity planning model for peak and load shaving problem. At the ...

Nowadays, all countries in the world are working hard to cope with the challenges of fossil energy shortage and excessive carbon emissions [[1], [2], [3]] has become a global consensus to develop clean and low-carbon renewable energy sources such as wind energy and solar energy [4]. However, the inherent randomness, volatility, and intermittency of ...

Energy storage Energy supply Peak regulation or spinning reserve Energy conversion ... but also enable the CSP plant to have the function of peak load regulation. Thus, the introduction of EH further expands the adjustment ability of the system and the accommodation space for wind energy. ... Economic dispatch of integrated electricity-heat-gas ...

The optimal configuration of the rated capacity, rated power and daily output power is an important prerequisite for energy storage systems to participate in peak regulation on the grid side. Economic benefits are the main reason driving investment in energy storage systems. In this paper, the relationship between the economic indicators of an energy storage ...

In the optimized power and capacity configuration strategy of a grid-side energy storage system for peak regulation, economic indicators and the peak-regulation effect are two ...

When the load is at the peak of electricity consumption, the energy storage in the CSP plant and the ESS can bear more peak regulation pressure for the thermal power unit ...

With the rapid growth of electricity demands, many traditional distributed networks cannot cover their peak demands, especially in the evening. Additionally, with the interconnection of distributed electrical and thermal grids, system operational flexibility and energy efficiency can be affected as well. Therefore, by adding a portable energy system and a heat storage tank to ...

Applications of flywheel energy storage system on load frequency regulation combined with various power generations: A review. ... and the generated power of solar energy reached 823.6 TWh by 2022, ... are interconnected with the power grid to facilitate the penetration of renewable energy and to address frequency and peak regulation demand.

Energy storage (ES) can mitigate the pressure of peak shaving and frequency regulation in power systems with high penetration of renewable energy (RE) caused by uncertainty and inflexibility. However, the demand for ES capacity to enhance the peak shaving and frequency regulation capability of power systems with high penetration of RE has not been ...

Energy storage is a good way to solve the challenges brought by the access of high proportion of renewable energy and plays an important role in peak load regulation [6], [7], [8]. Energy storage can store the excess renewable energy while the period of load valley and release the stored energy while the period of load peak, so as to smooth the ...

A concentrating solar power (CSP) plant with a high-capacity thermal storage system (TES) is a utilization form of solar energy (Zhang et al., 2022). TES can store heat ...

The lack of sufficient energy storage solutions, combined with fluctuations in energy production mainly due to an increase in solar and wind power, creates an urgency for modern energy solutions. This article will give you insight into the importance of frequency regulation, how it works, and the role of modern technologies in enhancing grid ...
