The urgency for developing energy storage in North America, along with the economics of energy storage projects, surpasses that of Latin America. Latin America faces constraints such as limited available land and the absence of a regulatory system, making it a longer journey to reach the period of installed demand for

energy storage volume.

Most solar cookers usually perform a single task of solely cooking food during sunshine hours. Solar cookers coupled with thermal energy storage (TES) material for off-sunshine cooking are usually expensive and require complex engineering designs, and cannot be used for dual purposes, for example, solar water heating and cooking. In this paper, a solar ...
