What is compressed air energy storage (CAES)?

Compressed air energy storage (CAES) is an effective solution for balancing this mismatch and therefore is suitable for use in future electrical systems to achieve a high penetration of renewable energy generation.

How does a compressed air energy storage system work?

The performance of compressed air energy storage systems is centred round the efficiency of the compressors and expanders. It is also important to determine the losses in the system as energy transfer occurs on these components. There are several compression and expansion stages: from the charging, to the discharging phases of the storage system.

Where is compressed air used for energy storage?

In the transition to using compressed air as the main energy system, the first sets of commercial-scale compressed-air energy storage systems are the 270 MW Huntorf system in Germany [29], and Macintosh's 110 MW CAES plant in Alabama, United States [30].

What is a compressed air storage system?

The compressed air storages built above the ground are designed from steel. These types of storage systems can be installed everywhere, and they also tend to produce a higher energy density. The initial capital cost for above- the-ground storage systems are very high.

What determinants determine the efficiency of compressed air energy storage systems?

Research has shown that isentropic efficiency for compressors as well as expanders are key determinants of the overall characteristics and efficiency of compressed air energy storage systems. Compressed air energy storage systems are sub divided into three categories: diabatic CAES systems, adiabatic CAES systems and isothermal CAES systems.

What are the advantages of compressed air storage system?

Provides significantly high energy storage at low costs. Compressed air storage systems tend to have quick start up times. They have ramp rate of 30% maximum load per minute. The nominal heat rate of CAES at maximum load is three (3) times lower than combustion plant with the same expander.
