What are the planets that orbit around the Sun?

The nine planets that orbit the sun are (in order from the Sun): Mercury, Venus, Earth, Mars, Jupiter (the biggest planet in our Solar System), Saturn (with large, orbiting rings), Uranus, Neptune, and Pluto (a dwarf planet or plutoid). A belt of asteroids (minor planets made of rock and metal) orbits between Mars and Jupiter.

Which planets are not in our Solar System?

Terrestrial or inner planets Mercury,Venus,Earth,and Mars. Giant or outer planets Jupiter,Saturn,Uranus,and Neptune According to scientists,our Universe has billions of planets but our solar system only has 8. There are other different types of planets that exist but are not in our Solar System,such as rogue planets and exoplanets.
