Deep cycle batteries are designed specifically for storing the energy generated by a photovoltaic PV systems and then discharging this stored energy for use on a consistent, daily basis. One of the main requirements for deep-cycling batteries for solar applications is maximum cycle life, that is how many times can the battery be charged and the discharged or deep cycled.

A system designer will also determine the required cable sizes, isolation (switching) and protection requirements. Notes: 1. The new standard AS/NZS5139 introduces the terms "battery system" and "Battery Energy Storage System (BESS)". Traditionally the term "batteries" describe energy storage devices that produce dc power/energy.
